PROFESSIONAL SUMMARY

Software Engineer building AI-integrated and data-intensive products across four production platforms in the Gopaddi travel, hospitality, finance, and HR ecosystem, serving 10,000+ registered users and 100+ partner businesses. Built and shipped three production AI assistants spanning trip planning, financial workflows with voice input, and HR policy Q&A. Architected a registry-driven reporting engine that reduced new-report delivery from two days to under two hours, feature- and action-level RBAC across 30+ modules, and end-to-end API payload encryption across 13 supplier verticals. Strong in React, TypeScript, Next.js, API-driven architecture, testing, CI/CD, and AI-assisted engineering, with a focus on turning repetitive implementation patterns into reusable systems and leveraging AI to accelerate development while maintaining verification and production quality.

TECHNICAL SKILLS

Core: React 19, TypeScript, Next.js, JavaScript (ES6+), HTML5, CSS3

AI Integration: In-app AI assistants & copilots, conversational UI, voice input, LLM-backed Q&A and escalation flows

UI & Styling: Tailwind CSS (v3 & v4), Shaden UI, Radix UI, Framer Motion, Figma-to-code

State & Data: TanStack Query v5, Zustand 5, react-hook-form, Zod 4, Axios, nuqs, REST, GraphQL

Real-time & Offline: WebSockets (Laravel Echo / Reverb, Pusher), PWA / Service Workers, IndexedDB

Architecture: Feature-based architecture, design systems, RBAC, code splitting, SSR/SSG, lazy loading, component-driven development, accessibility

Testing & Performance: Vitest, Testing Library, Playwright, Lighthouse, Core Web Vitals, client-side caching

Integrations: Paystack, Flutterwave, Mono Connect (open banking), Google OAuth / Maps, Sentry, PostHog

Tooling: Git, GitHub, Azure DevOps, CI/CD, Docker, Vercel, npm, Postman

Also: Python, Dart, Flutter, Node.js

PROFESSIONAL EXPERIENCE

Frontend Engineer | Voyatek Group

Feb 2025 – Present | Lagos, Nigeria (Hybrid)

- Integrated **AI assistants across the ecosystem**: Paddi AI for trip recommendations and itinerary planning on Gopaddi.com, an in-app copilot on Gopaddi Books with selection toolbar and voice input, and Ally on Gopaddi HR for policy Q&A with FAQ-cluster and escalation analytics.
- Designed a **registry-driven reporting architecture** on Gopaddi Books that powers 14+ financial reports (P&L, Balance Sheet, Cash Flow, Trial Balance, General Ledger, Tax Summary, AR/AP Aging, GDS travel revenue) from a single configurable shell, reducing the work to add a new report type from roughly two days to under two hours.
- Built a **feature- and action-level RBAC system** on Gopaddi HR gating 30+ modules including payroll, leave, attendance, and multi-entity organizations, with permission-filtered navigation and route guards; integrated Flutterwave for payroll funding, sub-accounts, and payslip generation.
- Implemented end-to-end **API payload encryption** (RSA-OAEP + AES-256-GCM) via Axios interceptors on the Gopaddi Supplier platform, making all request and response bodies opaque in the browser network tab and protecting sensitive partner business data across 13 hospitality and travel verticals.
- Created and maintained the **Jungle shared component library** (tables, modals, filters, tabs, date pickers, status badges, activity feeds) adopted across all four Gopaddi products, eliminating duplicate UI implementations across multiple feature teams and standardizing design token usage.

- Built the live restaurant ordering experience on Gopaddi.com: menu and category browsing, WebSocket-driven order status tracking, and Paystack checkout — converting passive restaurant listings into a transacting product for partner restaurants.
- Built the social layer of Gopaddi.com: travel timelines, post creation and resharing, a follow system, comments and likes, travel communities, collaborative trip planning with shared itineraries and payment splitting, and a real-time Moments feature for ephemeral story sharing.
- Engineered a self-serve event management and ticketing product on Gopaddi.com covering event creation with cover uploads, ticket type configuration, RSVP and invitation workflows, and QR-based attendee check-in.
- Delivered the full double-entry accounting lifecycle on Gopaddi Books — invoices, quotes, sales orders, receipts, credit notes, bills, purchase orders, vendor credits, chart of accounts, and journal entries, plus bank reconciliation with a rules engine and Mono Connect for account linking.
- Developed an end-to-end recruitment ATS on Gopaddi HR spanning job requests, approval workflows, a Kanban candidate pipeline, referral tracking, and a public careers board with applications.
- Improved application performance through React.lazy() route splitting, manual Vite chunk configuration, TanStack Query caching with disciplined mutation invalidation, and PWA plus IndexedDB-backed offline storage for large CSV import and data-cleaning workflows.
- Worked in cross-functional squads of 2–3 engineers across four concurrent product teams, coordinating asynchronously with remote engineers to resolve cross-product dependencies, and partnering with designers in Figma to ship responsive, accessible interfaces.

IT Support Associate (NYSC) | **Voyatek Group**

Mar 2024 – Feb 2025 | Lagos, Nigeria

- Resolved hardware, software, and network issues for internal staff, sustaining 95%+ operational uptime.
- Designed and deployed responsive HTML email templates, strengthening brand consistency across communications.
- Led technical onboarding for new hires and supported product and engineering teams cross-functionally.

Earlier IT Support Experience

Kabzeel Investment Limited (2023), Swift Networks Limited (2021–2022), and Lagos State Ministry of Information & Technology (2021) — covering access control, database and billing system monitoring, and digital transformation support.

PROJECTS

Gerich Restaurant (*React, Next.js, Tailwind CSS, Redux*) — *gerich-restaurants.vercel.app*

Responsive restaurant platform with featured dishes, chef specials, opening hours, and a reservations flow.

Credit Card Fraud Detection (*Python, Scikit-Learn, XGBoost, Random Forest*)

Trained and compared ensemble models (XGBoost, Random Forest, KNN, Logistic Regression) to classify fraudulent transactions, evaluated with precision-recall curves and F1 scores.

EDUCATION

B.Sc. Computer Science | **Olabisi Onabanjo University, Ogun State**

2018 – 2023 | Second Class Honours

CERTIFICATIONS

- IBM Front-End Development Professional Certificate
- IBM Applied AI Professional Certificate
- Google IT Support Professional Certificate
- Cloud Application Development Foundations (IBM)
